Mochi · Design Decisions

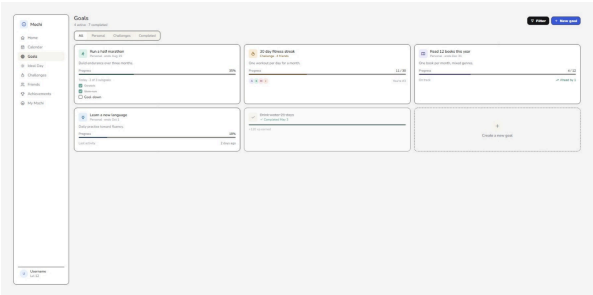

01 Sign up

A split layout lets the left panel show the main promise, “Build habits with your Mochi,” next to three simple value props, while the right panel keeps the form to just three fields. One tab toggle switches between Sign up and Log in, so there is no separate page to find. The companion shows up right away, so the user feels the hook before signing up.

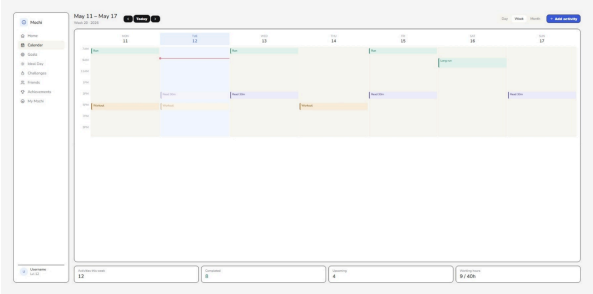

02 Home

One morning screen shows everything you need to act on today: your streak, XP earned, today’s goals (which you can check off in place), and active challenges. The month calendar is colour-coded by how much you finished, so progress is easy to read at a glance. The Mochi sits in the top right as a steady reminder that links daily effort to the companion.

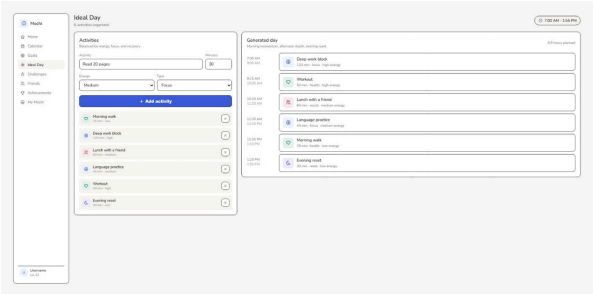

03 Goals

A card grid keeps active goals separate from completed ones, with progress bars and subgoal checkboxes so you can move a goal forward without leaving the page. Labels like “On track” and “Ahead by 1” turn plain numbers into encouragement instead of pressure. A “Create a new goal” tile is always there so the main action is easy to find.

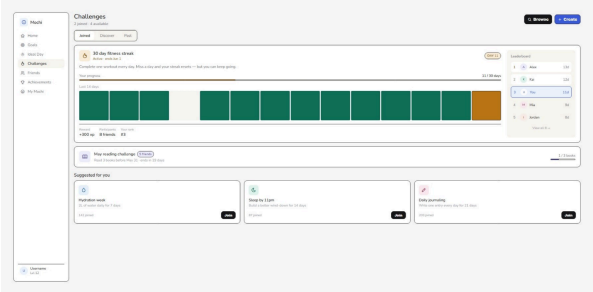

04 Calendar

A time-blocked week view uses familiar calendar layout, so activities like Run, Read and Workout feel like real plans instead of vague ideas. Colour categories make it easy to scan activity types fast, and the Day, Week and Month toggle fits different planning needs. A footer summary gives a quick view of how the week is going.

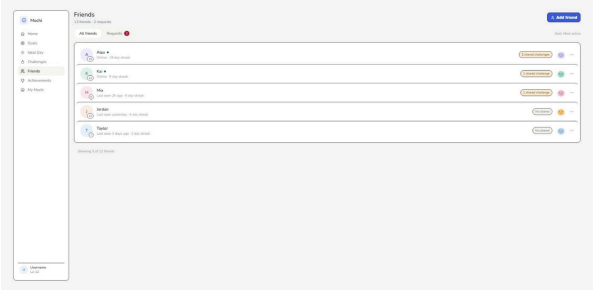

05 Ideal Day

You describe activities by energy and type, and the app orders them into a balanced day: momentum in the morning, focus in the afternoon, and a reset in the evening. This takes the work out of planning a schedule while still letting you control the inputs. The build-and-preview layout, side by side, makes it clear how your choices shape the day.

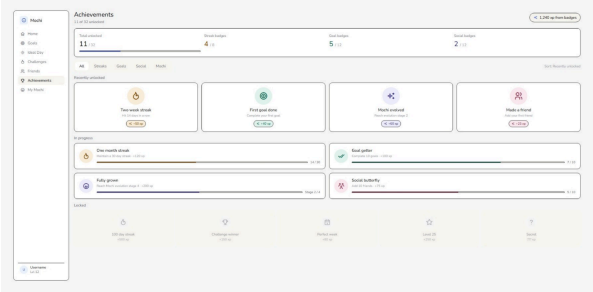

06 Challenges

Group challenges with a set end date, a leaderboard and a 14-day streak grid turn solo habits into shared accountability. Suggested challenges show how many people joined, which gently nudges others to take part. Visible XP rewards tie the extra effort back to the companion’s growth.

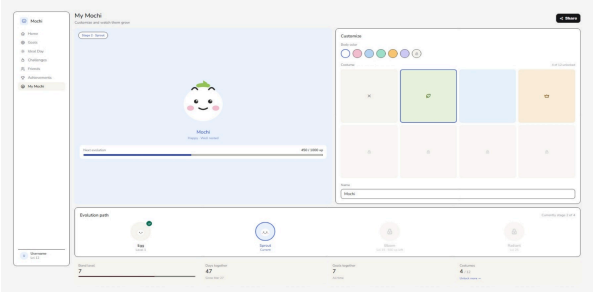

07 Friends

A simple list, sorted by activity, shows streaks and shared challenges, so friends feel like accountability partners rather than a feed to scroll. Online status and “last seen” add a light sense of presence. Shared-challenge badges make it natural to invite each other to compete.

08 Achievements

Badges are grouped by Streaks, Goals and Social, with clear unlocked, in-progress and locked states, so you can always see the next reward within reach. Progress bars on in-progress badges create a pull to finish, while locked and secret tiles add curiosity. Every badge shows its XP value to link effort to growth.

09 My Mochi

The companion is the heart of the product, so it gets its own screen for customizing colour, costumes and name, plus a clear evolution path. Tying evolution to XP makes steady habits feel like caring for something alive. Stats like bond level, days together and goals together build attachment and give a reason to come back.
